

REMOVE EXCESS WATER WITH MINIMAL SURFACE DISRUPTION

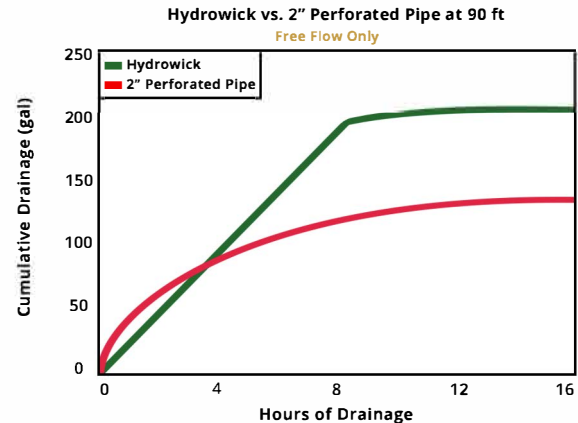

The proper installation of Hydrowick will quickly eliminate standing water and soggy ground. Hydrowick's unique design uses capillary and siphoning action to move water to and through its open core, providing significant flow capacity over time. Its patented construction eliminates the need for additional geotextile fabric, and it will not become constricted due to fine soil particles.

SUPERIOR TECHNOLOGY

- ◊ US Patent: US8100604B1
- ◊ 2× faster than traditional pipe-based drainage systems
- ◊ Provides fast, free-flow drainage by passive capillary action
- ◊ Hydrowick's unique construction drains and removes water that is not accessible with a conventional pipe system
- ◊ Alternative to expensive French drains
- ◊ Capillary action will move water up and over obstacles

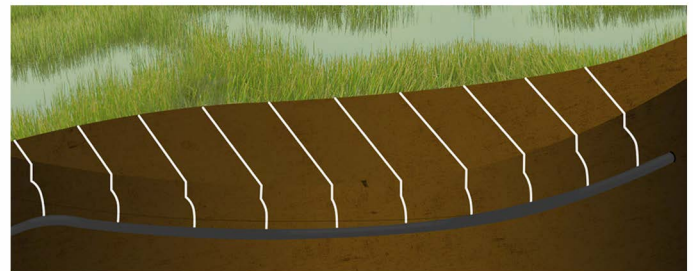

Hydrowick drain layout using a catch basin

FAST, RELIABLE INSTALLATION

- ◊ No conventional drainage excavation or pipe systems
- ◊ Easily installed under grass or hardscaping
- ◊ Minimize installation time and labor
- ◊ Lightweight, extremely flexible construction
- ◊ Minimal grass recovery time

Hydrowick installed where drainage problems exist

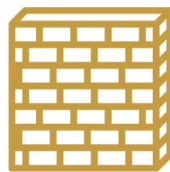

HYDROWICK IS PERFECT FOR:

Residential & Commercial Drainage

Water Management for Hardscaping

Behind Retaining Walls

Water Permeable Pavement

Golf Course Greens & Fairways Drainage

Landscaping Drainage
