

City of Pembroke Pines – Speed Hump Guidance

There are many steps required prior having speed humps installed on a public street. The first step is for the residents of the affected street to submit a petition requesting the installation of speed humps. The petition must indicate that a minimum of 85% of the property owners are in favor of the speed humps. This petition should be submitted to the City Engineer's office which is located at 8300 S. Palm Drive Pembroke Pines, FL 33025. Once the City receives the petition a traffic study will be requested from Broward County. If the traffic study indicates there is no speeding problem the request is closed. If the traffic study indicates there is a speeding problem, the Traffic Management Team will review the traffic study and prepare a recommendation to the City Manager. If the City Manager recommends consideration by the Commission of installation of the speed humps, an item will be placed on the Commission Agenda for consideration. Upon approval by the Commission, the City Engineer will create a plan showing the area or areas where speed humps can be installed per the speed hump guidelines and solicit proposals for the construction per the City's purchasing code.
