1.10 FREQUENTLY ASKED QUESTIONS (FAQs)

Question # 1	Who is the current hauler?
Answer	Westwind Contracting, Inc. is the current hauler.

Question # 2	What is the current price per cubic yard for “Lime Sludge Removal and Hauling at the Water Treatment Plant?”
Answer	The current price is \$8.90 per cubic yard.

Question # 3	How do you measure the quantity of each truck?
Answer	The contractor currently uses 20 cubic yard trucks to remove the material from the dry pit. The contractor must provide documentation on the volume for all trucks used to remove material from the water plant site. City personnel will verify that all trucks leave the site full.

Question # 4	Is it necessary to provide any information and/or permits for the final destination (dump location) of the sludge removed from the water plant?
Answer	The contractor is required to provide sufficient information to insure the contractor is legally disposing of the material. The amount of information required will depend on where and how the material is being disposed of. All material is subject to review and approval. The City of Pembroke Pines retains the right to disqualify any contractor that does not provide sufficient documentation to verify that the material is being legally disposed of.

Question # 5	Could you give me an idea on what method of removal you have planned for the sludge in this project? Can it be vacuumed, excavated or will it need to be dredged?
Answer	The contractor needs to excavate the lime sludge from the wet pond to the dry pond about every 4-6 weeks. The lime then must sit in the dry pond for a minimum of 4-6 weeks to dry before it can be placed in trucks by the contractor then removed from the site. The material has been excavated

	<p>from both the wet and dry ponds at the water plant site for more than 25 years. We believe excavation is the most practical method for removing this material from the site. However, means and methods are at the discretion of the contractor. Any method will be considered provided the contractor can meet the demands for material removal and not take up extensive space or cause damage to any portion of the water plant.</p>
